

eTurns TrackStock

**Eliminate out-of-stocks.
Avoid overstocks.
Save time and resources.**

eTurns is a next-generation VMI/CMI application that streamlines point-of-use replenishment. The system actively monitors and manages inventory levels of fast-selling products, automatically replenishing stock based on real-time sales data. This optimizes inventory levels, ensuring consistent product availability while minimizing stockouts and overstocking.

The **higher** the **turnover rate**, the more effective our **VMI program** is at managing inventory levels and minimizing holding costs.

Cost Savings and Efficiency Gains

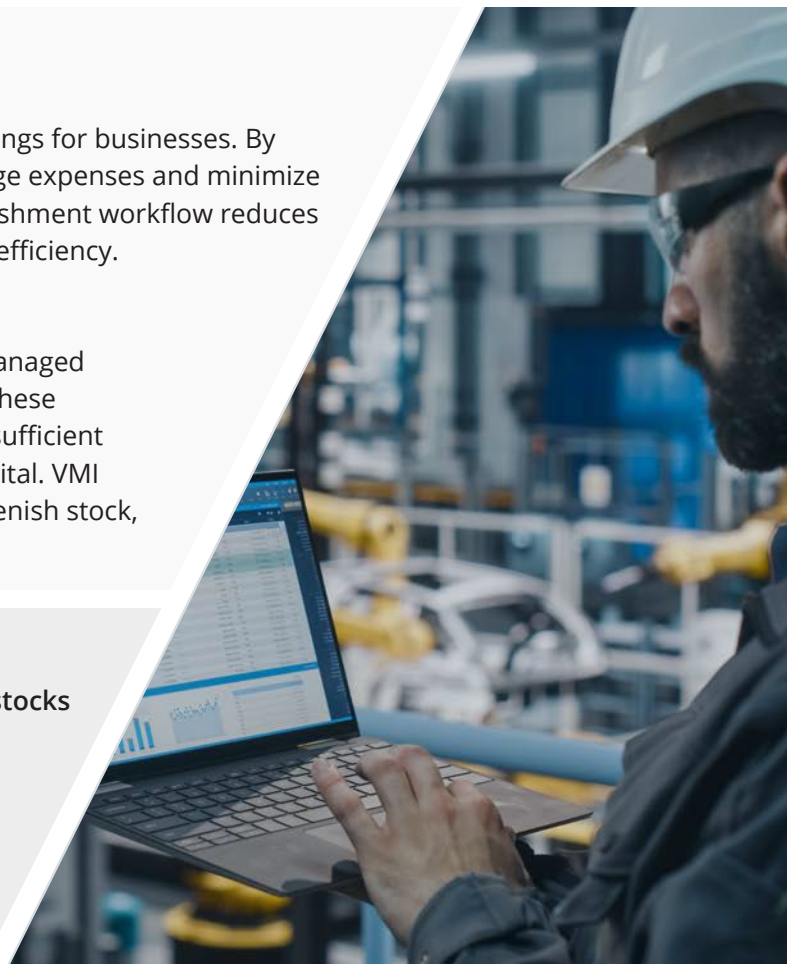

Implementing a VMI program can yield substantial cost savings for businesses. By optimizing inventory levels, organizations can reduce storage expenses and minimize losses from obsolete or excess stock. A streamlined replenishment workflow reduces administrative overhead and enhances overall operational efficiency.

High-Volume Products

For businesses managing high-volume products, Vendor Managed Inventory (VMI) can optimize inventory more efficiently. In these scenarios, maintaining the right stock levels is critical, as insufficient inventory leads to costly stockouts, while excess ties up capital. VMI enables vendors to monitor sales data and proactively replenish stock, ensuring inventory aligns with customer demand.

Benefits

- » Greater visibility into replenishment, reducing out-of-stocks
- » Save time planning, forecasting, and ordering
- » 10x faster than replenishing with spreadsheets
- » Turn-key solution that can be up and running quickly
- » User-Friendly Mobile & Desktop Interface
- » SOC 2 Type 2 certification for security and availability

eTurns TrackStock

Efficiency

10x faster than replenishing with spreadsheets or ecommerce. One scan captures company, item, package, quantity and location.

Cutting Edge Technology

Reduce inventory, stockouts, and carrying costs with auto-replenishment technologies including SensorBins, Electronic Shelf Labels, RFID, QR code scans.

Consolidation

Spend 90% less on procurement by eliminating paper POs and moving to consolidated digital POs.

Robust Reporting

85 customizable reports to track counting, ordering, items, suggested orders, and more. Reports can be set up with email alerts for greater visibility.

Optimized Turns

Optimize inventory with Min/Max Tuning analytics. Eliminate stockouts while reducing inventory up to 73% and decrease carrying costs.

Flexible Solution

Whether replenishing consigned or customer-owned inventory, we can customize the program to meet your needs.
